WORK EXPERIENCE

● **TCS consulting solutions** caracas, Venezuela

Software developer

10/10/2018 – 12/12/2022

At TCS, I began my career as a Junior Java Consultant, focusing on analyzing and resolving defects reported by the QA team.

My responsibilities included reproducing issues, performing root-cause analysis, and implementing solutions using Java SE/Java 8, advanced debugging tools, **IntelliJ IDEA**, **Postman**, **JUnit 4/5**, **Mockito**, and version control with **Git** / **GitLab**.

After six months, I transitioned to an insurance project where I took on a Full-Stack Developer role. I developed new front-end views and modules using **Angular 8-12**, TypeScript, HTML5, SCSS, and Bootstrap, following component-based architecture, service integration, interceptors, and reactive programming with RxJS.

On the back-end, I built RESTful services and microservice components using **Java 8** and **Spring Boot 2.x**, applying DTO/Repository patterns and optimizing SQL queries for **MySQL**.

I also handled front-end integration with Java services, wrote unit and integration tests (JUnit, Mockito), ensured code quality with **SonarQube**, and supported deployment and maintenance across development and production environments until my departure in 2022.

● **Clinica Ana Cecilia** Caracas, Venezuela

Software developer

15/01/2019 – 15/06/2022

At Clínica Ana Cecilia, I designed and built from scratch a complete web-based management platform that included both an accounting control system and a medical appointment scheduling system. I developed a responsive front-end using **React 16-17**, JavaScript (ES6+), HTML5, CSS3, and Bootstrap, implementing reusable components, state management with Hooks, and REST-based communication.

On the back-end, I created a secure API using **Node.js (Express 4.x)**, following MVC architecture, JWT-based authentication, and data validation with libraries like Joi. I modeled and managed clinical and financial data using **MongoDB** (with Mongoose ODM), implementing indexes, aggregation pipelines, and optimized queries for reporting features such as doctor statistics and patient flow tracking.

The system also included a real-time queue management module to control laboratory appointments by arrival order. For testing, I used **Jest**, **Supertest**, and **Postman** for endpoint validation.

I deployed the full system to **AWS**, leveraging services such as **EC2**, **Elastic Beanstalk**, **MongoDB Atlas**, S3 for static assets, and CI/CD pipelines using **Git Hub + AWS CodePipeline** to ensure smooth production releases.

● **Growin S.A** Lisboa, Portugal

Software developer

14/12/2022 – 30/07/2025

At Growin, I worked as a Full-Stack Developer for Siemens, contributing to the development and modernization of large-scale web applications.

On the front-end, I created new UI modules and enhanced existing views using **Angular 13-16**, TypeScript, RxJS, and SCSS, applying best practices in component architecture, state management, and performance optimization. I also supported Angular version upgrades, refactoring deprecated modules, resolving breaking changes, and ensuring full compatibility with the latest frameworks and build tools. On the back-end, I extended the existing **Node.js (Express 4.x)** API by implementing new endpoints, improving data models, and integrating external services.

Additionally, I designed and deployed multiple serverless components using **AWS Lambda (Python)**, **S3**, **Cloud Watch**, and **API Gateway**, building event-driven functions for data processing, file ingestion, and automated workflows.

I also gained hands-on experience with **Amazon OpenSearch**, implementing indexed queries, optimizing mappings, and integrating search features into the application stack. My role involved continuous testing with **JUnit**, **Supertest**, and **Postman**, version control with **Git/GitHub**, and close collaboration with cross-functional teams to deliver high-quality, production-ready features.

CGI Lisbon, Portugal

Software developer

01/08/2025 – Current

Worked as a Full Stack Developer at CGI for the client Castle Water, contributing to the development of a water service payment management system. On the frontend, designed and implemented scalable, component-based user interfaces using Angular, ensuring maintainability and a responsive user experience. On the backend, developed and maintained RESTful APIs and implemented business logic, as well as designed and optimized SQL stored procedures for CRUD operations (insert, update, delete) to ensure data integrity and efficient database performance. Collaborated across the stack to deliver robust, end-to-end solutions aligned with business requirements.

EDUCATION AND TRAINING

10/01/2016 – 10/06/2020 Caracas, Venezuela

Software Engineer universidad alejandro de humbold

Field of study Software and applications development and analysis | Level in EQF EQF level 6

LANGUAGE SKILLS

MOTHER TONGUE(S): Spanish

Other language(s):

English

Listening C1

Spoken production C1

Reading C1

Spoken interaction C1

Writing C1

Portuguese

Listening A2

Spoken production A2

Reading A2

Spoken interaction A2

Writing A2

Italian

- Listening A2
- Spoken production A2
- Reading A2
- Spoken interaction A2
- Writing A2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

SKILLS

Angular | Javascript (React.js) | TypeScript | JavaScript | CSS3 | JavaScript (ES6+) | HTML5 | SCSS / SASS | Bootstrap | Ionic | Responsive Web Design | UI/UX Implementation | Component-Based Architecture | RxJS | Java SE | Java 8 | Spring Boot 2.x | Node.js | Express.js | JWT Authentication | RESTful API Design | MVC Architecture | MongoDB | Mongoose (ODM) | MySQL | SQL | Aggregation Pipelines | Indexing & Query Optimization | AWS | AWS Lambda (Python) | AWS S3 | AWS CloudWatch | AWS API Gateway | AWS EC2 | AWS Elastic Beanstalk | AWS CodePipeline | Serverless Architecture | Amazon OpenSearch | Index Design & Mapping | Search Query Optimization | Document Indexing | JUnit 4/5 | Mockito | Jest | Supertest | Postman | SonarQube | Debugging & Root Cause Analysis | Git | GitHub | GitLab | IntelliJ IDEA | Visual Studio Code | WebStorm | Agile / Scrum | Problem Solving | Analytical Thinking | Fast Learning | Code Refactoring | Technical Documentation
